Re-Assessment- Treatment Plan for the Treatment of Autism Spectrum Disorder

Report Information:	
Date of Initial Assessment: 12/31/2025	Date of Current Report: 07/09/2026 to 07/30/2026
	Authorization Dates Requested: 08/25/2026 to 02/25/2027

Patient Information:	
Patient Name: Kendra E Djissodey AKA: N/A	Patient DOB: 10/26/2021
Patient Age: 4	Patient Gender: Female
Patient Payor: Molina Healthcare - Medicaid	Patient Insurance ID: VQ71575M

Provider Information:	
Name of Company: MasterFaster	
Service Address: 105 Schunnemunk Rd, Monroe NY, 10950	Federal Tax ID#: 46-0644321
Provider Contact: Katherine Schlosser	Certification: BCBA, LBA
Phone: 845-477-5000	Certification / License #: 1-18-29435/001841
Email: services@masterfaster.org	NPI: 1427458835

Hours Requesting:				
Hours Requesting:	Code/Description:	Provided by:	Place of Service:	Clinical Rationale:

8 hours per authorization Period.	97151-Assessment	BCBA/LBA	Telehealth, Home, Office, and/or Community.	The requested 97151 assessment hours are medically necessary to complete a comprehensive behavior identification reassessment and evaluate Kendra's response to treatment during the previous authorization period. During this time, the BCBA will conduct direct observation, caregiver interviews, record reviews, and standardized and criterion-referenced assessments, as clinically indicated, to evaluate Kendra's communication, social, adaptive, play, and behavioral skills. The BCBA will also assess the effectiveness of the current Behavior Intervention Plan by monitoring antecedent interventions, reinforcement procedures, prompting strategies, functional communication interventions, and behavior reduction procedures targeting maladaptive behaviors. Assessment findings will be used to evaluate medical necessity, measure treatment response, identify current skill deficits and behavioral excesses, revise treatment goals and mastery criteria, update the Behavior Intervention Plan, and modify intervention strategies as clinically indicated to ensure treatment remains individualized, medically necessary, and reflective of Kendra's current level of functioning.
N/A hours per week.	97151-Treatment Planning	N/A	N/A	N/A
18 hours per week	97153-Direct Care	Behavior Technician	Home, Office, and/or Community	Direct ABA services are recommended to decrease from 21.5 hours per week to 18 hours per week. This reduction reflects both the caregiver's request for a modified treatment schedule and Kendra's meaningful progress during the previous authorization period. Throughout treatment, Kendra has demonstrated improvements in foundational communication, learning readiness, social engagement, and treatment participation, resulting in increased tolerance for instructional activities and reduced need for

				intensive direct intervention in certain areas. While continued ABA services remain medically necessary due to persistent deficits in communication, social interaction, adaptive functioning, emotional regulation, and behavioral flexibility, Kendra is clinically appropriate for a gradual reduction in direct service hours. The reduced schedule will allow treatment to continue addressing remaining skill deficits and maladaptive behaviors while promoting increased independence, maintenance of acquired skills, and generalization across home, school, and community settings. The BCBA will continue to monitor Kendra's response to the reduced schedule and adjust treatment recommendations if clinically indicated.
N/A hours per week.	97154-Social Skills Group	N/A	N/A	N/A
2 hours per week.	97155-Supervision/ Behavior Treatment Modification (BTM)	BCBA/LBA	Telehealth, Home, Office, and/or Community.	Supervision of technician hours are required to ensure ABA treatment is being implemented correctly and ethically. The supervising BCBA will train the behavior technician, monitor progress, adjust programs, and probe skills if applicable. Behavior Treatment modification will be used for the BCBA to work directly with the client to assess progress, implement changes, generalize treatment across settings, and refine the treatment based on the current and unique needs of the client.
3 hours per month	97156-Parent Training	BCBA/LBA	Telehealth, Home, Office, and/or Community.	Parent Training will be used to teach parents how to implement ABA strategies and generalize skills to the home setting.

Hours Approved Previous Authorization:

Biopsychosocial Information:
Diagnosis: F84.0
Secondary Diagnosis: N/A
Diagnosed By: Susan Troiso Ms. Ed./ Teresa Polito MD
Date of Most Recent Diagnosis: 9/22/2024
Reason for Referral: Kendra continues to require medically necessary Applied Behavior Analysis (ABA) services due to persistent deficits in communication, social interaction, adaptive functioning, emotional regulation, and behavioral flexibility associated with Autism Spectrum Disorder. During the previous authorization period, Kendra demonstrated progress in several foundational

communication, social, and learning readiness skills through intensive ABA intervention. Despite these gains, she continues to exhibit clinically significant deficits in functional communication, listener responding, social reciprocity, cooperative play, transitions, and tolerance of delayed or denied access to preferred items. She also continues to engage in maladaptive behaviors, including tantrums, which interfere with learning, daily routines, and overall independence.

Ongoing ABA services remain medically necessary to expand Kendra's communication repertoire, increase independence with adaptive and social skills, strengthen functional replacement behaviors, reduce maladaptive behaviors, and promote the generalization and maintenance of acquired skills across home, school, and community settings. Continued treatment will focus on advancing developmental skills while systematically fading prompts, increasing independence, and supporting long-term functional outcomes.

Family History:

Kendra is a 4-year-old girl who resides with her parents and one sister in the Bronx, New York. English is the primary language spoken in the home. Family history is significant for Autism Spectrum Disorder, as Kendra's maternal uncle has a diagnosis on the autism spectrum. There are no religious or cultural factors that may impact treatment.

Developmental/Psychological History:

Kendra has a diagnosis of Autism Spectrum Disorder and was diagnosed at approximately 2.5 years of age. Pregnancy and delivery were reportedly uncomplicated. Parents first became concerned regarding development at approximately 18 months of age due to delays in language and social communication. Although gross motor milestones were achieved within expected timeframes, expressive language developed later than expected, with first words emerging closer to 3 years of age. Since beginning ABA services, Kendra has demonstrated progress in functional communication, learning readiness, and social engagement; however, clinically significant deficits remain in expressive language, reciprocal social interaction, adaptive functioning, emotional regulation, and behavioral flexibility. She has no reported history of hospitalizations, no known allergies, and is not currently prescribed medication. Kendra's primary care physician is Dr. Polito.

Educational History:

Kendra has an IEP and attends a full-day special education preschool program at PS163 where she receives speech, occupational, and physical therapy. Continued collaboration between caregivers, educational providers, and the ABA team will support generalization of skills across settings.

First day of ABA services with Master Faster: 05/13/2026

History of ABA Services with Previous Providers:

Kendra initiated ABA services with Master Faster on May 13, 2026. Because services began midway through the authorization period, treatment initially emphasized rapport building, instructional control, caregiver training, functional communication, learning readiness, and reduction of maladaptive behaviors. During this period, Kendra demonstrated meaningful progress in treatment participation, communication, and social engagement while continuing to require intervention for remaining deficits in communication, adaptive functioning, behavioral flexibility, and emotional regulation. She has not previously received ABA services from another provider.

Patient received ABA services with a different provider: No

Start Date: N/A

End Date: N/A

Response to ABA therapy with previous provider: N/A

Reason for change: N/A

School Name:

PS163

Education Level:

Special Education

Patient Areas of Strength:

Kendra is a happy, energetic, and engaging child who demonstrates strong motivation to participate in play-based activities. She enjoys interactive play with her family, pretend play, matching games, puzzles, magnetic tiles, and trains. Throughout the authorization period, Kendra demonstrated increased participation in structured learning activities and improved engagement with adults during instructional tasks. She has shown growth in her ability to answer yes/no questions independently, participate in turn-taking activities, and engage in cooperative play with adult support. Kendra responds well to positive reinforcement, visual supports, and play-based instruction and is motivated by praise, preferred toys, and interactive activities. She is affectionate with familiar adults, frequently seeks positive social interactions, and continues to demonstrate a positive affect and willingness to learn. These strengths provide a solid foundation for continued skill acquisition and generalization across home, school, and community settings.

Current Problem Areas:

Social/Communication Problem Areas

Problem Area:	Deficits in social-emotional reciprocity, ranging, for example, from abnormal social approach and failure of normal back_and_forth conversation:to reduced sharing of interests, emotions, or affect: to failure to initiate or respond to social interactions.	Deficits in nonverbal communicative behaviors used for social interaction, ranging, for example, from poorly integrated verbal and nonverbal communication; to abnormalities in eye contact and body language of deficits in understanding and use of gestured; to a total lack of facial expressions and nonverbal communication.	Deficits in developing, maintaining, and understanding relationships, ranging, for example, from difficulties adjusting behavior to suit various social contexts; to difficulties in sharing imaginative play or in making friends; to absence of interest in peers
---------------	---	--	---

As evidenced by:	Kendra has demonstrated progress in her expressive language and is now able to answer simple yes/no questions independently and communicate using single words and emerging phrases. However, she continues to demonstrate delays in spontaneous functional communication and does not consistently use age-appropriate 2-3 word phrases to initiate, maintain, or participate in reciprocal conversations. She continues to require prompting to communicate her wants, needs, and emotions across a variety of settings and communication partners.	Kendra continues to demonstrate inconsistent eye contact and inconsistently responds to her name, particularly when engaged in preferred activities. She benefits from verbal and gestural prompts to orient to communication partners and requires continued intervention to improve joint attention and social engagement.	Kendra has demonstrated progress in cooperative play and turn-taking with adult support; however, she continues to require prompting to engage appropriately with peers, sustain reciprocal play, share materials, and demonstrate flexibility during play activities. She also continues to experience difficulty with emotional regulation during social interactions, which impacts her ability to independently participate in age-appropriate peer play across settings.
--------------------------------	--	---	--

Behavior Problem Areas				
Problem Area:	Stereotyped or repetitive motor movements, use of objects, or speech (e.g., simple motor stereotypes, lining up toys or flipping objects, echolalia, idiosyncratic phrases).	Insistence on sameness, inflexible adherence to routines, or ritualized patterns of verbal or nonverbal behavior (e.g., extreme distress at small changes, difficulties with transitions, rigid thinking patterns, greeting rituals, need to take same route or eat same food every day).	Highly restricted, fixated interests that are abnormal in intensity or focus (e.g., strong attachment to or preoccupation with unusual objects, excessively circumscribed or perseverative interests).	Hyper- or hyperactivity to sensory input or unusual interest in sensory aspects of the environment (e.g., apparent indifference to pain/temperature, adverse response to specific sounds or textures, excessive smelling or touching of objects, visual fascination with lights of movement).
As evidenced by:	No clinically significant stereotypic or repetitive motor behaviors currently interfere with Kendra's learning or	Kendra continues to demonstrate difficulty transitioning away from	Kendra demonstrates preferences for specific toys and activities; however, these interests do not currently interfere with treatment participation. This	Kendra continues to seek vestibular and proprioceptive input through activities such as climbing, jumping, and frequent movement throughout the environment. She

	daily functioning. This area will continue to be monitored throughout treatment.	preferred activities and tolerating changes in routines. She may engage in tantrum behavior, including crying, yelling, dropping to the floor, or refusing to transition when preferred activities end or when access to preferred items is delayed or denied. She benefits from visual supports, transition warnings, First-Then statements, and functional communication strategies to increase successful transitions.	area will continue to be monitored throughout the authorization period.	demonstrates high activity levels and occasionally attempts to climb on furniture, requiring supervision, redirection, and instruction in safe alternative activities. Sensory-seeking behaviors may interfere with sustained attention and participation in structured learning activities.

Assessment of Current Functioning:

Provider Location During Assessment: Telehealth

Patient Location during Assessment: Home

Assessment Date: 07/29/2026

Assessment Methods/Measures:

The VB MAPP Assessment was administered by Katherine Schlosser, BCBA.

The VB-MAPP is a criterion-referenced assessment tool, curriculum guide, and skill tracking system that is designed for children with autism, and other individuals who demonstrate language delays. The VB-MAPP is based on B.F. Skinner's (1957) analysis of verbal behavior, established developmental milestones, and research from the field of behavior analysis.

There are five components of the VB-MAPP, and collectively they provide a baseline level of performance, a direction for intervention, a system for tracking skill acquisition, a tool for outcome measures and other language research projects, and a framework for curriculum planning. Each of the skills in the VB-MAPP is not only measurable and developmentally balanced, but they are balanced across the verbal operants and other related skills. For example, many aspects of an intraverbal repertoire are based on an existing tact and listener repertoire. The VB-MAPP balances the curriculum in an attempt to avoid the common trap of developing rote responding due to deficiencies in the related verbal repertoires.

Below you will find the milestone grid

Communication Skills and Deficits

The client demonstrates strong foundational communication skills, with mastery of nearly all VB-MAPP Level 1 milestones and emerging acquisition of Level 2 language skills, resulting in an overall milestone score of **69/170**. Expressive language includes functional manding and tacting of familiar people, objects, and activities, and the client is beginning to use short phrases to communicate wants and needs. Receptive language skills have improved and include following simple directions, identifying familiar items, and emerging receptive language by feature, function, and class (LRFFC). Echoic and imitation skills are relative strengths and continue to support language acquisition. Despite this progress, deficits remain in higher-level verbal behavior, including intraverbal responding, conversational reciprocity, generalization of expressive language across settings and

communication partners, and the spontaneous use of more complex sentences. These deficits continue to impact the client's ability to independently communicate, answer open-ended questions, and engage in age-appropriate conversations.

Social Skills and Deficits

The client demonstrates increased interest in social interaction and engages appropriately with familiar adults and family members during structured and naturalistic activities. Basic social play and joint engagement skills are emerging, and the client is beginning to participate in turn-taking and simple interactive activities with support. However, social interactions continue to require adult facilitation, and the client demonstrates difficulty independently initiating interactions, responding consistently to peers, maintaining reciprocal exchanges, and participating in cooperative play. Skills related to peer engagement, social problem solving, conversational reciprocity, and group participation remain below age expectations and continue to interfere with successful participation in school, community, and recreational environments.

Functional and Adaptive Skills and Deficits

The client demonstrates continued progress in functional learning readiness skills, including visual discrimination, matching, imitation, early academic readiness, and participation in structured learning activities. She is able to attend to tabletop tasks, complete matching and sorting activities, and is developing pre-academic skills such as number identification and writing numbers. Functional play skills have expanded; however, independent pretend play, flexible play routines, and generalized play with peers remain limited. Although the client has shown improved compliance with daily routines and instructional demands, she continues to require prompting for more complex receptive language tasks, social interactions, and adaptive functioning. Ongoing deficits in advanced communication, play, and social skills continue to impact her independence and support the medical necessity for continued ABA services.

Assessment Summary Statement:

The VB-MAPP was administered to assess Kendra's current verbal behavior, language, learning, and social skills and to guide treatment planning. Kendra obtained a total score of **69 out of 170 possible points**, demonstrating mastery of nearly all **Level 1** milestones, emerging acquisition of **Level 2** skills, and early development of pre-academic skills in reading, writing, and mathematics. Compared to her previous assessment, Kendra has demonstrated meaningful progress in expressive and receptive language, imitation, visual perceptual and matching skills, early academic readiness, and participation in structured learning activities.

Assessment results indicate relative strengths in functional manding, tacting familiar items, listener responding to simple instructions, imitation, and visual discrimination skills. Kendra has also demonstrated increased participation in structured activities and improved learning readiness skills. Despite this progress, clinically significant deficits remain in higher-level language, including intraverbal responding, conversational reciprocity, language generalization, advanced listener responding, and receptive language by feature, function, and class (LRFFC). Delays also continue to be observed in peer interactions, cooperative and imaginative play, group learning skills, and social communication.

Overall, the assessment findings support the continuation of medically necessary ABA services. Ongoing treatment will focus on expanding spontaneous functional communication, increasing conversational and social interaction skills, strengthening higher-level receptive and expressive language, promoting generalization across people and environments, and developing age-appropriate play, adaptive, and early academic readiness skills to improve Kendra's overall independence and quality of life.

Areas of Focus for Treatment:

☒ Challenging Behavior

☒ Language and Communication

☒ Social Skills

☒ Functional Skills

Clinical Interpretation/Response to Treatment:

☐ Rapid Response

☒ Adequate Response

☐ Slow Response

☐ Insufficient Response

Notes on response to treatment:

Kendra has demonstrated an adequate response to ABA treatment during the current authorization period. She has made measurable gains in expressive and receptive language, imitation, visual discrimination, learning readiness, and early academic skills, as reflected by an increase in her VB-MAPP Milestones score to 69/170. She has mastered numerous treatment goals and demonstrated reductions in maladaptive behavior, including decreased frequency and intensity of tantrums. Kendra continues to acquire new communication, social, and adaptive skills and is progressing into early Level 2 verbal behavior milestones. Despite this progress, clinically significant deficits remain in higher-level language, social communication, play, generalization of skills, and adaptive functioning. Continued ABA services remain medically necessary to further develop these skills, promote generalization across settings and communication partners, and reduce the need for ongoing prompting and adult support.

Barriers to Treatment:

Notes on barriers to treatment:

Kendra's progress has been influenced by several treatment barriers during the current authorization period. There was a lapse in services between the start of the authorization period and the initiation of treatment (from 2/24 until 5/13), resulting in reduced opportunities for skill acquisition and generalization. Additionally, Kendra's communication delays, limited generalization of newly acquired skills, and ongoing deficits in social communication and adaptive functioning continue to impact the rate at which new skills are acquired. As language and social demands become increasingly complex, Kendra requires ongoing repetition, systematic prompting, caregiver involvement, and programming across multiple settings to promote maintenance and generalization of skills. Despite these barriers, Kendra has demonstrated steady progress and continues to benefit from medically necessary ABA intervention.

Results of Preference Assessment:

A preference assessment was conducted with Kendra through direct observation during therapy sessions, caregiver report, and ongoing assessment of responses to potential reinforcers. Reinforcer preferences continue to be monitored regularly to maintain motivation and maximize treatment effectiveness.

Client's primary reinforcers (in order of preference):

- Chocolate chip cookies
- Candy
- Tablet/iPad time

Client's secondary/paired reinforcers:

- Bluey-themed activities
- Stuffed animals
- Puzzles
- Verbal praise
- High-fives and social praise

Generalized Reinforcer Schedule (Token Economy):

Kendra will continue to participate in a token economy system to increase motivation and maintain responding during instructional activities. Reinforcement will initially be delivered on a **Fixed Ratio 1 (FR1)** schedule, with one token provided for each correct or independent response. Once Kendra earns **five tokens**, she may exchange them for a preferred backup reinforcer. As Kendra demonstrates increased independence, endurance, and consistent responding, the BCBA will systematically thin the reinforcement schedule and increase response requirements to promote maintenance and generalization of skills while maintaining treatment effectiveness.

Behavior Intervention Plan:

Behavior: Tantrums	Baseline: Parent report indicated tantrum behavior occurred approximately 4 times per day, with episodes lasting an average of 5–7 minutes.
---------------------------	--

Operational Definition: Any instance of crying, screaming, yelling, dropping to the floor, throwing objects, refusing to transition, or other disruptive behaviors. Behaviors may occur individually or as part of a behavioral escalation and are scored as a single episode. The episode begins with the first occurrence of any target behavior and ends after 30 consecutive seconds without tantrum behavior.

Current Level: Average of 1 tantrum per session, lasting less than 1 minute. One tantrum lasted for 31 minutes and 54 seconds.

FBA Hypotheses:

When access to preferred items or activities is denied or delayed, when preferred activities end, or when non-preferred demands or transitions are presented, Kendra engages in tantrum behavior to obtain access to preferred items, delay or escape demands, or communicate frustration when unable to effectively express her wants and needs.

Prevention/Proactive Strategies:

To reduce the likelihood of tantrum behavior, the following proactive strategies will be implemented:

- Implement an individualized reinforcement system using highly preferred activities, tangible items, and social praise to maintain motivation and increase engagement.
- Pair and build rapport through frequent access to preferred activities and positive interactions.
- Arrange the environment to reduce unnecessary triggers, limit unrestricted access to highly preferred items, prepare materials in advance, and provide structured learning opportunities.
- Provide frequent opportunities for Kendra to appropriately request preferred items, activities, assistance, breaks, additional time, or alternatives using her current communication skills before problem behavior is likely to occur.
- Utilize visual schedules, First-Then boards, transition warnings, timers, countdowns, and other visual supports to prepare Kendra for changes in activities and expectations.
- Offer choices whenever possible to increase predictability, independence, and instructional control.
- Use behavioral momentum by interspersing mastered tasks with acquisition tasks.
- Reinforce functional communication, waiting, behavioral flexibility, compliance, and other appropriate replacement behaviors immediately and consistently.

Functionally Equivalent Replacement Behaviors:

Kendra will be systematically taught to replace tantrum behavior with the following functionally equivalent replacement behaviors:

- Appropriately request preferred items or activities using words or short phrases.
- Request assistance when unable to independently complete a task or access preferred items or activities.
- Request a break when tasks become difficult or overwhelming.
- Request additional time before transitioning from preferred activities.
- Request an alternative activity when a preferred item or activity is unavailable.
- Appropriately tolerate denied or delayed access by waiting, selecting an alternative activity, or appropriately communicating disappointment.
- Transition appropriately between preferred and non-preferred activities.
- Follow First-Then directions.

Consequence Strategies/Behavior Management Strategies:

If tantrum behavior occurs:

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

- Ensure the safety of Kendra and others using the least restrictive procedures necessary.
- Remain calm and minimize attention while withholding access to the maintaining reinforcer contingent upon the tantrum behavior.
- Once calm, prompt Kendra to engage in the appropriate replacement behavior.
- Immediately reinforce the appropriate replacement behavior according to the treatment plan.
- Return to instruction and resume teaching opportunities.
- Collect ABC and frequency data to evaluate treatment effectiveness.

Current Techniques Being Implemented:

Treatment procedures include, but are not limited to:

- Pairing and rapport building
- Functional Communication Training (FCT)
- Differential Reinforcement of Alternative Behavior (DRA)
- Positive Reinforcement
- Natural Environment Teaching (NET)
- Discrete Trial Training (DTT), when appropriate
- Prompting and prompt fading
- Shaping
- Behavioral Momentum
- Visual supports and visual schedules
- Choice making
- Generalization programming
- Maintenance programming
- Caregiver training using Behavior Skills Training (BST)

Behavior: Elopement

Baseline: Parent report indicated elopement behavior occurred approximately 3 times per day

Operational Definition: Elopement is defined as Kendra moving away from a designated area or caregiver without permission by running, walking away, or leaving the immediate instructional or safe environment, resulting in the need for caregiver intervention to ensure her safety.

Current Level: 0 instances per session

FBA Hypotheses:

Kendra's elopement is hypothesized to be maintained by escape from non-preferred demands or transitions and access to preferred items or activities. Elopement has historically occurred when Kendra was asked to transition, complete non-preferred tasks, or when access to preferred items was denied or delayed. The absence of elopement during the current authorization period suggests that proactive antecedent strategies, functional communication training, and differential reinforcement have been effective in reducing the behavior. Continued intervention will focus on maintaining these gains and promoting generalization across settings and caregivers.

Prevention/Proactive Strategies:

To reduce the likelihood of elopement behavior, the following proactive strategies will be implemented:

- Pairing and rapport building to maintain instructional control.
- Environmental arrangement to reduce access to unsafe exits and increase supervision during high-risk situations.
- Visual schedules, First-Then boards, and transition warnings to prepare Kendra for upcoming changes.
- Providing frequent choices throughout activities to increase cooperation and decrease escape-maintained behavior.
- Using behavioral momentum by presenting several high-probability requests before more challenging tasks.
- Offering frequent opportunities to appropriately request a break, additional time, assistance, or an alternative activity.
- Reinforcing appropriate transitions, remaining with caregivers, and responding to safety instructions.
- Priming expectations prior to community outings and transitions between activities.
- Providing frequent reinforcement for staying within designated areas and maintaining proximity to caregivers.

Functionally Equivalent Replacement Behaviors:

Kendra will be systematically taught to replace elopement behavior with the following functionally equivalent replacement behaviors:

- Appropriately remain with caregivers during transitions and community activities.
- Respond to safety instructions (e.g., "Stop," "Come here," "Wait").
- Request a break appropriately.
- Request additional time before transitioning.
- Request assistance when needed.
- Request an alternative activity or item.
- Transition appropriately between preferred and non-preferred activities.
- Wait appropriately for access to preferred items or activities.
- Tolerate denied or delayed access to preferred items or activities.

Consequence Strategies/Behavior Management Strategies:

If elopement occurs:

- Immediately ensure Kendra's safety using the least restrictive intervention necessary.
- Calmly guide Kendra back to the designated area with minimal attention to the elopement behavior.
- Avoid providing access to the maintaining reinforcer contingent upon elopement.
- Once calm and safe, prompt the appropriate replacement behavior (e.g., requesting a break, requesting help, requesting additional time).
- Reinforce appropriate communication, remaining with caregivers, and compliance with safety instructions.
- Resume instruction or the ongoing activity as appropriate.
- Collect ABC and frequency data to monitor patterns and treatment effectiveness.

Current Techniques Being Implemented:

- Positive Reinforcement
- Functional Communication Training (FCT)
- Differential Reinforcement of Alternative Behavior (DRA)
- Natural Environment Teaching (NET)
- Discrete Trial Training (DTT)
- Prompting and Prompt Fading
- Behavioral Momentum
- Visual Supports

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

- Choice Making
- Antecedent Interventions
- Generalization Programming
- Maintenance Programming
- Behavioral Skills Training (BST) with caregivers

Recommended Behavior Reduction Goals

Behavioral Summary:

Kendra continues to engage in maladaptive behavior that interferes with learning, transitions, and participation in daily routines. Her primary challenging behavior is tantrum behavior, which consists of crying, screaming, yelling, dropping to the floor, refusing to transition, and, at times, throwing objects. Tantrums most commonly occur when access to preferred items or activities is denied or delayed, when preferred activities end, when non-preferred demands are presented, or when unexpected changes in routines occur. Historically, these behaviors have been maintained by access to preferred items or activities and escape or avoidance of non-preferred tasks. When tantrum behavior occurs, caregivers implement the Behavior Intervention Plan by prompting functional communication, reinforcing appropriate replacement behaviors, and minimizing reinforcement of maladaptive behavior.

During the current authorization period, Kendra has demonstrated meaningful progress toward her behavior reduction goals. The frequency and duration of tantrum behavior have decreased substantially, with most episodes resolving in less than one minute, although occasional longer episodes continue to occur. She has also demonstrated increased use of functional communication to request breaks, additional time, assistance, and preferred items in place of challenging behavior. Although elopement was identified as a concern based on caregiver report at intake, no instances of elopement have been observed since ABA services began, and the behavior reduction goal has been successfully mastered. Continued ABA services remain medically necessary to further improve behavioral flexibility, tolerance of delayed or denied access to preferred items, transitions between activities, and generalization of appropriate replacement behaviors across caregivers and environments.

Severity of Maladaptive Behavior: Moderate

Severity of Restrictive and Repetitive Behavior: Mild

Severity of Aggression, Self Injury, Property Destruction and/or Elopement: Mild

Behavior Reduction Goals:

Note: Data begins mid authorization due to direct services being initiated on 5/13.

Program Goal: Elopement

Target Name: Client will reduce instances of elopement

Date Initiated: 01/05/2026

Baseline: 3 per day Frequency

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

Mastery Criteria: No more than 2 instances per week for 12 consecutive weeks

Sampling Method: Frequency

Mastery Date: 07/24/2026

Status: Mastered

Current Data: 0 Frequency

Graph: n/a

Additional Notes: no instances of elopement have been observed since ABA services began, and the behavior reduction goal has been successfully mastered

Program Goal: Tantrums

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

Target Name: Client will reduce instances of tantrums

Date Initiated: 01/05/2026

Baseline: 4x per day Frequency

Mastery Criteria: No more than 1 instance per week for 5 consecutive sessions

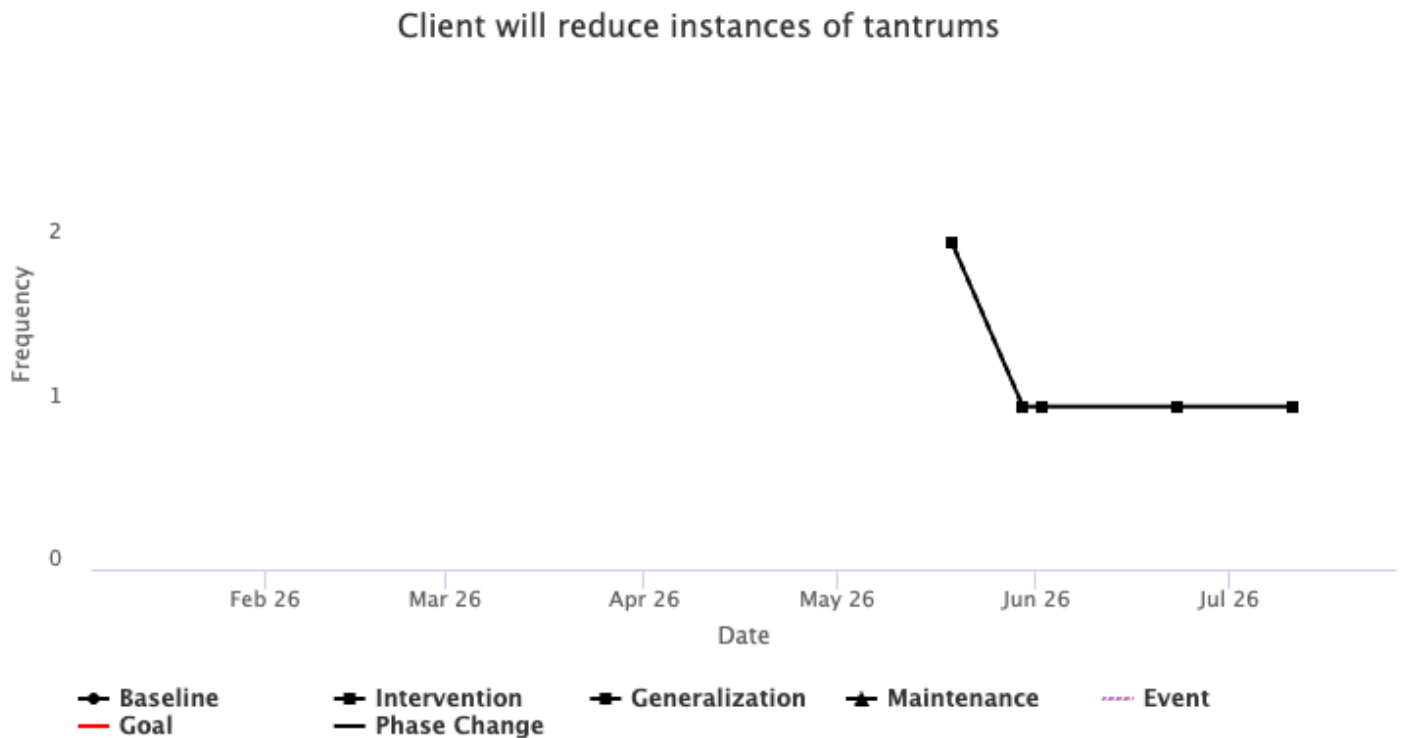

Sampling Method: Frequency

Anticipated Mastery Date: 02/19/2027

Goal Progress:

Skill Acquisition Summary and Rationale:

Kendra has demonstrated progress across multiple developmental domains since the initiation of ABA services. She has increased her use of functional communication, independently answers yes/no questions, demonstrates improved cooperative play skills, follows simple one-step directions with greater consistency, and has made gains in functional skills, including improved transitions and the elimination of elopement during the current authorization period. Despite this progress, Kendra continues to present with deficits in expressive and receptive language, including answering WH questions, tacting actions and emotions, expanding spontaneous language, conversational reciprocity, behavioral flexibility, waiting, and independently completing age-appropriate adaptive and social routines. Continued ABA intervention will target these areas through individualized skill acquisition programming, generalization across settings and caregivers, and maintenance of mastered skills. Goals that have been mastered will transition to maintenance or be discontinued as acquisition targets, while newly developed goals will address Kendra's current areas of need and support continued developmental progress.

Severity of Communicative/Social Deficits: Moderate

Severity of Deficits Related to Task Completion, Self Care, or Recognizing Danger: Moderate

Mastered Goals:

Name of Skill: Within 6 months, Kendra will independently follow one-step instructions during structured and natural environment activities in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently answer yes/no questions when asked "Do you want ___?" at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently select a different age-appropriate game or activity following completion of a preferred activity in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently clean up game materials upon completion of an activity following a verbal instruction in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently state or describe the rules of a familiar game before or during play in at least 80% of opportunities across 5 consecutive sessions.

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently imitate a two-component sequence of actions following the instruction, "Do this," in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently request assistance from another person using an appropriate verbal response when needed in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently request permission to use an item using an appropriate verbal response in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Within 6 months, Kendra will independently request additional time before transitioning or completing a task using an appropriate verbal response in at least 80% of opportunities across 5 consecutive sessions.

Date Mastered: 07/26/2026, Last Three Days Average in Maintenance: 0

Name of Skill: Client will tolerate waiting for a preferred item or activity for 1 minutes

Date Mastered: 07/02/2026, Last Three Days Average in Maintenance: 00:00:00

Goals in Progress:

Note: Data begins mid authorization due to direct services being initiated on 5/13.

Skill Domain: Functionally Equivalent Replacement Behaviors

Cumulative Goal: Decreasing Tangibly Maintained Problem Behavior

Target Goal: Within 6 months, Kendra will appropriately request an alternative preferred activity or item when a preferred activity or item is unavailable in at least 80% of opportunities across 5 consecutive sessions

Goal Status: Not yet targeted. This target has not yet been directly addressed because treatment has prioritized foundational communication, learning readiness, and behavior reduction goals that serve as prerequisite skills for successful acquisition of this target. As Kendra has demonstrated progress and mastery of these prerequisite skills, this target will be introduced during the current authorization period.

Date Initiated: 01/05/2026

Baseline: 0%

Mastery Criteria: 80% of the opportunities across 5 consecutive sessions

Sampling Method: Percent Correct

Current Data: 0

Anticipated Mastery Date: 02/19/2027

Cumulative Goal: Decreasing Escape Maintained Problem Behavior

Target Goal: Within 6 months, Kendra will request a break (using verbal-vocal language, a break card, or ASL) before leaving an area or engaging in maladaptive behavior in at least 80% of opportunities across 5 consecutive sessions.

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

Goal Status: Not yet targeted. This target has not yet been directly addressed because treatment has prioritized foundational communication, learning readiness, and behavior reduction goals that serve as prerequisite skills for successful acquisition of this target. As Kendra has demonstrated progress and mastery of these prerequisite skills, this target will be introduced during the current authorization period.

Date Initiated: 01/05/2026

Baseline: 0%

Mastery Criteria: 80% of the opportunities across 5 consecutive sessions

Sampling Method: Percent Correct

Current Data: 0 Percent Correct

Anticipated Mastery Date: 02/19/2027

Target Goal: Within 6 months, Kendra will independently request to stop or discontinue an activity using an appropriate verbal response in at least 80% of opportunities across 5 consecutive sessions.

Goal Status: In progress. This target was recently introduced into treatment. Initial probe data demonstrate encouraging performance; however, additional opportunities are being presented to ensure the skill is demonstrated consistently and independently across sessions prior to meeting mastery criteria.

Date Initiated: 01/05/2026

Baseline: 0%

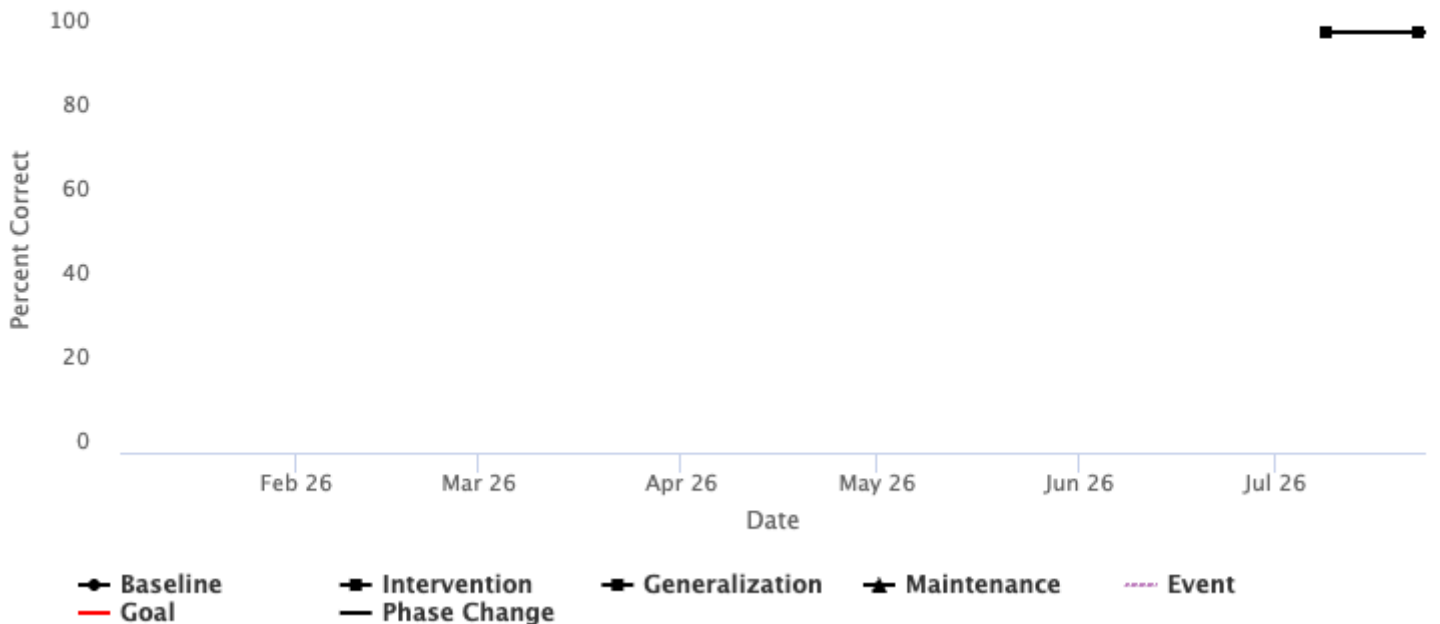

Mastery Criteria: 80% of the opportunities across 5 consecutive sessions

Sampling Method: Percent Correct

Current Data: 100 Percent Correct

Anticipated Mastery Date: 02/19/2027

Within 6 months, Kendra will independently request to stop or discontinue an activity using an appropriate verbal response in at least 80% of opportunities across 5 consecutive sessions.

Cumulative Goal: Tolerating Transitions

Target Goal: Within 6 months, Kendra will transition from a preferred activity to a mutually agreed upon or non-preferred activity within 5 seconds of the instruction without engaging in maladaptive behavior in at least 80% of opportunities across 5 consecutive sessions.

Goal Status: Not yet targeted. This target has not yet been directly addressed because treatment has prioritized foundational communication, learning readiness, and behavior reduction goals that serve as prerequisite skills for successful acquisition of this target. As Kendra has demonstrated progress and mastery of these prerequisite skills, this target will be introduced during the current authorization period.

Date Initiated: 01/05/2026

Baseline: 0% **Pls change to duration to align with sampling method or change sampling method on the tree and TP.**

Mastery Criteria: 80% of the opportunities across 5 consecutive sessions **Pls change to duration to align with sampling method or change sampling method on the tree and TP.**

Sampling Method: Percent Correct

Current Data: 0

Anticipated Mastery Date: 02/19/2027

Cumulative Goal: Tolerate Denied Access

Target Goal: Within 6 months, Kendra will appropriately tolerate denied or delayed access to preferred items or activities without engaging in maladaptive behavior in at least 80% of opportunities across 5 consecutive sessions

Goal Status: Not yet targeted. This target has not yet been directly addressed because treatment has prioritized foundational communication, learning readiness, and behavior reduction goals that serve as prerequisite skills for successful acquisition of this target. As Kendra has demonstrated progress and mastery of these prerequisite skills, this target will be introduced during the current authorization period.

CentralReach

New Goals:

Treatment plans are dynamic and may change during the authorization period. All modifications will be documented in the BCBA's session notes (e.g. 97155) and updated in the next treatment plan to ensure the patient's progress.

Skill Domain: Functionally Equivalent Replacement Behaviors

Cumulative Goal: Decreasing Escape Maintained Problem Behavior

Being that Kendra has mastered elopement, can you indicate why this goal is still important?

Although Kendra has mastered her elopement reduction goal and has demonstrated zero instances of elopement during the current authorization period, responding reliably to safety instructions remains an important preventative and adaptive skill. Mastery of the elopement goal does not confirm that Kendra can independently respond to safety directions across caregivers, environments, and naturally occurring high-risk situations. Kendra may also engage in tantrum behavior when presented with instructions or required to stop, wait, or transition. Therefore, this goal will promote safety, behavioral flexibility, and continued generalization of treatment gains across home and community settings.

Target Goal: Within 6 months, Kendra will respond to safety instructions (e.g., "Stop," "Wait," "Come here") within 5 seconds of the instruction without engaging in maladaptive behavior in at least 100% of opportunities across 5 consecutive sessions.

Goal Status: NEW

Date Initiated: 07/26/2026

Baseline: 0%

Mastery Criteria: 100% of the opportunities across 5 consecutive sessions

Parent/Caregiver Involvement:

Parent Involvement Summary:

Kendra's parents have consistently participated in monthly parent training sessions throughout the authorization period and have demonstrated increasing proficiency implementing ABA strategies within daily routines. (Parent training was initiated in April, as the parents were not available to participate in sessions during the preceding months.) Parent training has focused on proactive antecedent interventions, functional communication training, reinforcement procedures, prompting strategies, and teaching coping skills to reduce maladaptive behavior and increase independence. Parents have demonstrated meaningful progress implementing visual supports, offering choices, prompting functional communication, and reinforcing appropriate replacement behaviors. Continued caregiver training remains medically necessary to increase treatment fidelity, promote generalization across settings, and support long-term maintenance of treatment gains.

Parent/Caregiver Proficiency in ABA:

- ☐ Low
- ☒ Moderate
- ☐ High
- ☐ Proficient

Mastered Goals: N/A

Parent/Caregiver Goals:

Target Goal: During daily routines, the caregiver will independently implement proactive antecedent strategies, including visual supports, advance warnings, offering choices, priming, and first/then statements, with at least 90% procedural fidelity across 5 consecutive parent training sessions, as measured by BCBA observation and data collection.

Goal Status: In progress

Date Initiated: 01/05/2026

Baseline: 0%

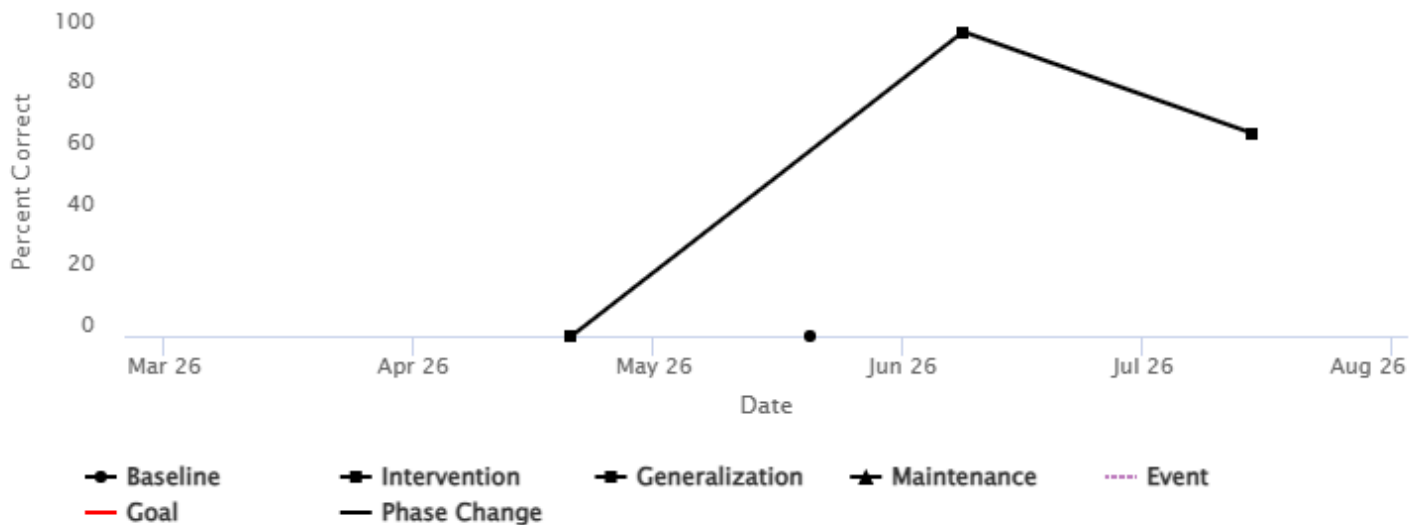

Mastery Criteria: at least 90% procedural fidelity across 5 consecutive parent training sessions

Sampling Method: Percent Correct

Current Data: 55.56 Percent Correct

Anticipated Mastery Date: 1/22/2027

During daily routines, the caregiver will independently implement proactive antecedent strategies, including visual supports, advance warnings, offering choices, priming, and first/then statements, with at least 90% procedural fidelity across 5 consecutive parent training sessions, as measured by BCBA observation and data collection.

CentralReach

Target Goal: When Kendra demonstrates signs of frustration or dysregulation, the caregiver will independently model, prompt, and reinforce appropriate coping skills, including deep breathing, maintaining a calm body, requesting a break, and using functional communication, with at least 90% procedural fidelity across 5 consecutive parent training sessions, as me

Goal Status: In progress

Date Initiated: 01/05/2026

Baseline: 0%

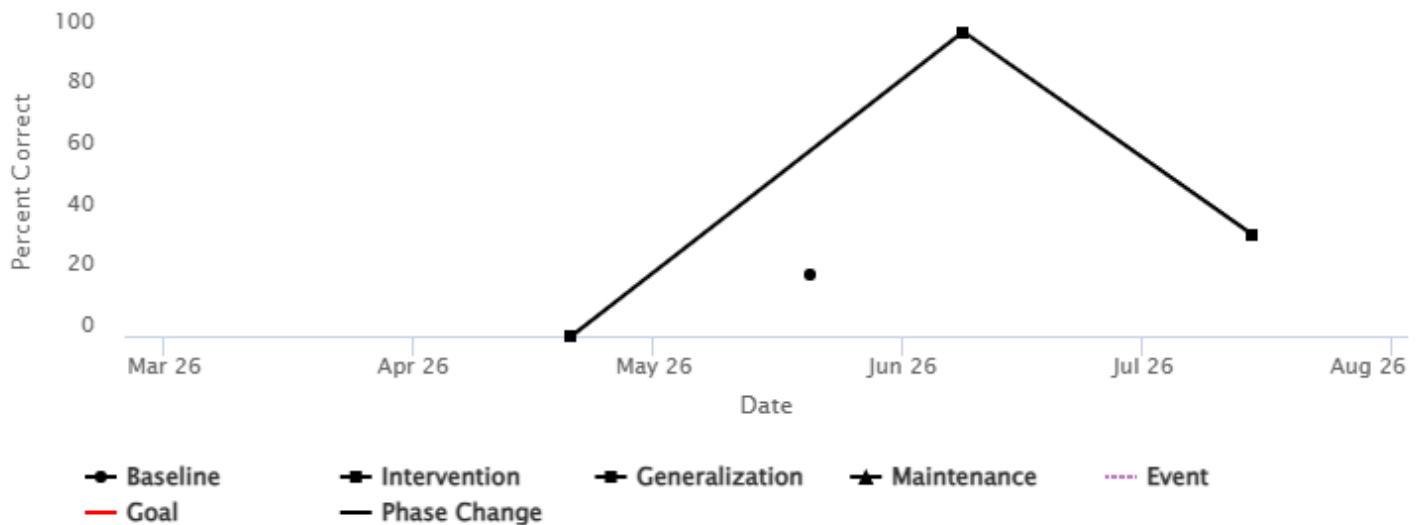

Mastery Criteria: at least 90% procedural fidelity across 5 consecutive parent training sessions

Sampling Method: Percent Correct

Current Data: 44.44 Percent Correct

Anticipated Mastery Date: 1/22/2027

When Kendra demonstrates signs of frustration or dysregulation, the caregiver will independently model, prompt, and reinforce appropriate coping skills, including deep breathing, maintaining a calm body, requesting a break, and using functional communication, with at least 90% procedural fidelity across 5 consecutive parent training sessions, as me

CentralReach

Target Goal: During naturally occurring daily routines, the caregiver will independently create opportunities for Kendra to use functional communication and will prompt and reinforce appropriate verbal requests for wants, needs, help, attention, or information with at least 90% procedural fidelity across 5 consecutive parent training sessions, as measured by BC

Goal Status: In progress

Date Initiated: 01/05/2026

Baseline: 0%

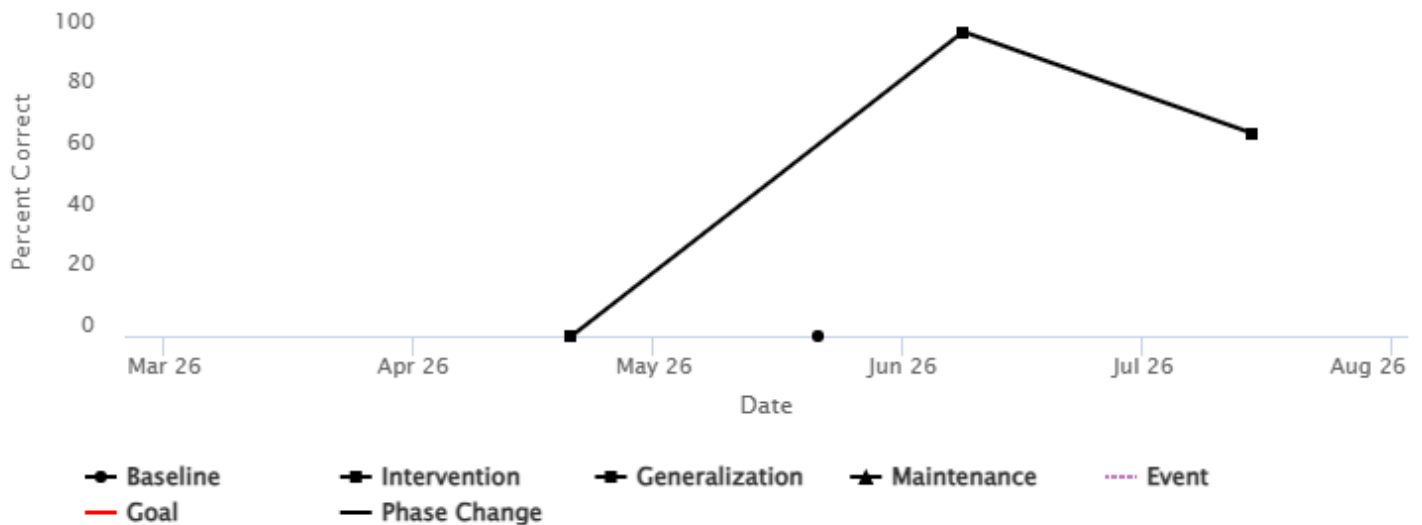

Mastery Criteria: at least 90% procedural fidelity across 5 consecutive parent training sessions

Sampling Method: Percent Correct

Current Data: 55.56 Percent Correct

Anticipated Mastery Date: 1/22/2027

During naturally occurring daily routines, the caregiver will independently create opportunities for Kendra to use functional communication and will prompt and reinforce appropriate verbal requests for wants, needs, help, attention, or information with at least 90% procedural fidelity across 5 consecutive parent training sessions, as measured by BC

CentralReach

Coordination with Other Health Providers:

Coordination of care did not occur during the previous authorization period. ABA services began on May 13, 2026, and Kendra's school year ended in June, which provided a limited timeframe to establish communication and coordinate with her educational team. With caregiver consent, the BCBA will seek to coordinate with Kendra's school team, related service providers, primary care provider, and other relevant professionals during the upcoming authorization period to promote consistency and generalization across settings. Coordination may occur through telephone calls, secure email, record exchange, or interdisciplinary meetings.

Treatment plan has been faxed to Dr. Polito on 07/01/2026 .

Transition Plan:

The decision to titrate services will be regularly evaluated in collaboration with parents, teachers, and other team members. The criteria below provide information relevant to this decision. Please note, it is not the only criteria that will determine when and how to titrate and transition ABA services.

Phase 1: When the following goals are mastered, maintained, and generalized across various settings and people, patient hours will be reduced by 2 hours per week.

Goal Name	Mastery Criteria
1. Kendra will independently use a 2-3 word functional phrase (e.g., "I want bubbles," "Help me please," "My turn") to request wants, needs, assistance, or activities	1. 80% accuracy across 5 consecutive sessions.
2. Kendra will appropriately wait for a preferred item or activity for 2 minutes using taught coping strategies without engaging in maladaptive behavior	2. 80% accuracy across 5 consecutive sessions.
3. Kendra will transition between preferred and non-preferred activities with no more than one verbal prompt and without engaging in maladaptive behavior	3. 80% accuracy across 5 consecutive sessions.

4. Kendra will independently request a break using an appropriate vocal response before leaving the instructional area	4. 80% accuracy across 5 consecutive sessions.
5. During daily routines, the caregiver will independently implement proactive antecedent strategies, including visual supports, advance warnings, offering choices, priming, and first/then statements.	5. at least 90% procedural fidelity across 5 consecutive parent training sessions, as measured by BCBA observation and data collection.
Phase 2: When the following goals are mastered, maintained, and generalized across various settings and people, patient hours will be reduced by an additional 2 hours per week.	
Goal Name:	Mastery Criteria:
1. When presented with pictures, videos, or naturally occurring activities, Kendra will independently label 10 common actions	1. 80% of opportunities across 4 consecutive weeks
2. Kendra will answer simple What and Where questions regarding familiar people, objects, and activities.	2. 80% of opportunities across 4 consecutive weeks
3. Kendra will participate in reciprocal play with an adult or peer for 5 consecutive minutes with no more than one verbal prompt.	3. 5 consecutive minutes across 4 consecutive weeks
4. Following denied or delayed access to a preferred item or activity, Kendra will appropriately accept the response by selecting an alternative activity, requesting another item, or remaining calm without engaging in maladaptive behavior.	4. 80% of opportunities across 4 consecutive weeks
5.	5.

During naturally occurring daily routines, the caregiver will independently create opportunities for Kendra to use functional communication and will prompt and reinforce appropriate verbal requests for wants, needs, help, attention, or information.	90% procedural fidelity across 4 consecutive months
Phase 3: When further goals are mastered across multiple people and settings, parent training goals are mastered and maintained, we will continue to reduce direct hours while increasing parent training hours. Phase 4: When parents have made progress in parent training and show proficiency in ABA and behaviors are reduced to manageable levels, hours will continue to titrate while ensuring parents maintain their proficiency. This is the final step toward discharge.	

Discharge Criteria: Prior to discharge, the transition plan above will be in place. The following criteria must be in place in order for the patient to be considered for discharge. Discharge will be considered when:
Goal Name
1. Kendra will independently use age-appropriate functional communication, including requesting wants and needs, answering questions, and communicating during daily routines without clinically significant maladaptive behavior.
2. Kendra will independently engage in age-appropriate social interactions, including initiating interactions, participating in reciprocal play, and responding appropriately to peers and adults across naturally occurring environments.
3. Kendra will independently demonstrate adaptive living and behavioral flexibility skills, including following directions, transitioning between activities, waiting appropriately, tolerating denied or delayed access, and completing daily routines without maladaptive behavior.
4. Kendra will maintain behavior reduction goals by demonstrating one or fewer tantrum occurrences per session across 28 consecutive calendar days while maintaining zero occurrences of elopement across 28 consecutive calendar days, using functionally equivalent replacement behaviors independently.

5.

Caregivers will independently implement proactive antecedent strategies, functional communication training, coping strategies, reinforcement procedures, and behavior intervention procedures with 90% procedural fidelity across 4 consecutive months, demonstrating the ability to maintain Kendra's treatment gains without ongoing intensive ABA services.

Patient Name: Kendra E Djissodey **Patient DOB:** 10/26/2021 **Patient Insurance:** Molina Healthcare - Medicaid
Patient Insurance ID: VQ71575M

Crisis Plan:

In case of inclement weather, therapists will not be expected to provide services. If a medical emergency arises, therapists are advised to call 911 and parents will be notified. Emergency contact information will be kept in the patient's files to be used if the parents are not present. In event of severe change in behavior; the therapist should remove the patient to a safe environment, notify the parents, and the BCBA. The office at Master Faster should be called: 845-477-5000. The incident should be recorded on a descriptive data sheet including the antecedent, behavior and consequence.

Risk Assessment:

ABA as a method is proven to be effective in making socially significant changes in behaviors of children with Autism Spectrum Disorder when applied properly. Some potential risks are when a therapist begins to implement the programs without proper training. Additionally, when attempting to place some maladaptive behaviors on extinction, patients may experience an "extinction burst" where the behavior seems to get worse before it begins to get better. However, if ABA therapy is not provided, patient may fail to acquire needed skills and maladaptive behaviors may persist. Additional risks may include prompt dependency, or response scrolling.

ABA is contraindicated if no progress is noted, or if symptoms get worse following the onset of services, that don't change after significant time has elapsed.
